Art Unit: 1742

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1, 14-19, 21 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over GB 613,041 (GB'041).

GB'041 discloses a method of forming an infiltrated body comprising:

providing a skeleton; and

infiltrating the skeleton with an infiltrant wherein the infiltrant has the same elemental composition as the skeleton.

GB'041 further discloses wherein the skeleton and infiltrant are formed of a multiple element systems (page 4, lines 3-29).

The Examiner notes that the term "melting point depressant" reads upon any of the additional elements to the ferrous alloy system.

Art Unit: 1742

4. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over GB 613,041 (GB'041) in view of Banerjee et al.

GB'041 discloses the method substantially as claimed (see paragraph 3 above).

However, GB'041 does not disclose wherein an element is present in the lower melting point infiltrant that is not present in the skeleton.

Banerjee et al. teaches in the same field of endeavor to add P to the infiltrant to increase the fluidity of the infiltrant.

It would have been obvious to add P to the infiltrant of GB'041 to improve the fluidity of the infiltrant into the skeleton when using an Fe based skeleton embodiment of G'041.

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 1 and 3-22 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-63 of U.S. Patent No. 6,719,948. Although the conflicting claims are not identical, they are not

Art Unit: 1742

patentably distinct from each other because the scope of the pending claims are encompassed by the patented claims.
